MadLib:

My team is building a website for compiling a list of almost all computer science related events, not only at NC State but across the country to help tech enthusiasts stay organized and up to date with the latest trends in computer science, as well as networking with people who have similar interests, by gathering information about computer science events across several different sites.

Elevator Pitch:

Although NC State's academic departments spend countless hours organizing student events, attendance is generally low due to email advertisement methods. During the semester, students and faculty alike receive incredibly high volumes of emails each day, making it difficult to highlight emails containing important information.

JointTech is an intra-major, community event forum to help NC State students avoid wasting time searching through cluttered email inboxes and missing out on academic event opportunities by providing a decentralized platform user-populated with upcoming departmental events.

If you're a busy student looking for a simpler way to highlight pertinent events, JointTech is for you!

MadLib: //Reworded a little to add "allowing users to post events of their Own"

My team is building a website for compiling a list of almost all computer science related events, not only at NC State but across the country. Our goal is to help tech enthusiasts stay organized and up to date with the latest trends in computer science, while also making networking with people who have similar interests even easier, by gathering information about computer science events across several different sites, as well as allowing our users to post events of their own.
